

Soul Sighted — Stripe → Klaviyo Marketing Consent Wiring

Goal

Capture marketing consent at checkout and automatically add customers to **Soul-Sighted Marketing (Klaviyo)** when they opt in.

This removes friction and ensures:

- high-quality list growth
 - compliant consent capture
 - seamless customer experience
-

System Overview

♦ Stripe (Checkout)

- Collects marketing consent via checkbox

♦ Xano (Backend)

- Receives Stripe webhook after successful payment
- Detects whether marketing consent was given

♦ Klaviyo

- Receives subscription via API
 - Adds user to **Soul-Sighted Marketing list**
 - Stores consent + source as profile properties
-

Implementation Steps

◆ 1. Stripe Checkout Setup

Enable promotional consent collection:

`consent_collection[promotions] = auto`

This ensures:

- a marketing opt-in checkbox appears where appropriate
 - consent is captured in Stripe Checkout Session
-

◆ 2. Stripe → Xano Webhook

On successful payment (`checkout.session.completed`):

Xano should retrieve:

```
{
  "customer_email": "user@email.com",
  "consent": {
    "promotions": "opt_in"
  }
}
```

◆ 3. Consent Logic in Xano

If:

`consent.promotions == "opt_in"`

Then proceed to subscribe user in Klaviyo.

If not:

- do nothing (user can still opt in later via email flow)
-

◆ 4. Xano → Klaviyo API Call

Use Klaviyo **server-side subscription endpoint** (NOT client-side):

👉 [/api/profiles/](#) or [/api/profile-subscription-bulk-create-jobs/](#)

Payload should include:

```
{
  "email": "user@email.com",
  "properties": {
    "marketing_opt_in": true,
    "signup_source": "stripe_checkout"
  }
}
```

And add user to list:

List ID: XPSdCW

Profile Properties (Klaviyo)

These should be set when consent is true:

marketing_opt_in = true
signup_source = stripe_checkout

Optional:

circle_joined = true

(only if you want Stripe opt-ins treated the same as Circle joins)

Fallback Path (Already Built)

If user does NOT opt in at checkout:

They can still join later via:

👉 Soul Sighted Circle link in emails

This ensures:

- no lost opportunity

- multiple entry points into marketing
-

Expected Behaviour

If user opts in at checkout:

- immediately added to Klaviyo list
- receives marketing emails going forward

If user does NOT opt in:

- receives only transactional emails
 - can later opt in via email CTA
-

What We Are Avoiding

-  Forcing opt-in (compliance risk)
 -  Duplicate subscriptions
 -  Manual list uploads
 -  Separate systems for marketing capture
-

Final Note

This setup ensures:

- clean consent handling
- strong list quality
- seamless customer journey

It also keeps marketing and product experience aligned under Klaviyo.
